

## The new paradigm for public service...

The mission of The Open Source Teaching Project is to implement community development strategies that empower students to take charge of their own learning, successfully complete high school, and earn a post-secondary degree.

## We have three simple steps...

1. Capture	2. Produce	3. Share
Students secure interviews with successful leaders, scholars, and students spanning all areas of business, commerce, and industry. Peer review is as a foundation for all project work.	Students digitally edit, peer review, and keyword tag captured interviews. Media files are keyword searchable, allowing for tremendous connections across interviews.	Students use blogs and other social media to make real-world connections, inform inquiry, and mentor other learners.
