\$12.50 per hour, maximum of 150 hours per semester or summer,  
Minimum 3.15 GPA

Duration

Academic Semester

Start Date

Flexible

Location

Anywhere with high speed access to the internet.

**Introduction**

We are on a national search for Global and Public Health Policy Research Interns for Social Media. Applicants must be an undergraduate or graduate student, currently enrolled in an institution of higher education. No previous background in social media is required.

Exemplary candidates will be outside the box thinkers with an exceptional ability to combine innovative ideas with a specific attention to detail. The internship is based on intensive research, project planning, timelines, follow-through, and strategy.

**Primary Responsibilities**

1. (60% of time) identify and perform research on innovative professors and graduate students whose expertise is focused on issues of public / global health and/or medicine, from their respective university, including surrounding institutions of higher education within their region; perform on-site, qualitative interviews of these leading professors, researchers, and graduate students based on standardized interview protocols focused on conveying academic insights and lessons learned about the pursuit of a career for the benefit of middle and high school students.

See <http://www.OpensourceTeaching.org>

Interviews are captured for the sole purpose of motivating and inspiring students about career options in a global economy.

Over the course of an academic semester or summer, the intern will conduct a minimum of 25 interviews on his / her local and surrounding college campus.

2. (30% of time) create innovative blog on global / public health.

See <http://www.OpensourceTeaching.org/blogsbystudents.html>

Lessons will be used for an innovative BETA pilot used to engage students (middle through high school) in core academics via YouTube, MySpace, Facebook, and other web 2.0 platforms.

3. (10% of time) project planning and research.

To date, this initiative has secured the future participation of over 200 of the world's leading scholars (spanning 70 national universities).

A specific example of our work can be found via our captured interviews to date:

Nobel Laureate Peter C. Doherty, Ph.D
